Main Considerations
Graduate students submit theses and dissertations to TRACE, the University of Tennessee’s open repository. This is in keeping with practices at other Carnegie R1 institutions. As an open repository, the public can view UT theses, which increases the profile of graduate student researchers and makes their work citable. Treating a thesis as the publication that it is means that graduate students must be aware of issues around copying, copyright, reprints, and duplicate publications.

1. Readers of a dissertation/thesis must be able to clearly tell when any part of the work has been, or will be, reprinted elsewhere. Both a notice within the overall dissertation/thesis “Acknowledgements” section, as well as another appearing within each chapter/reprint as a footnote or acknowledgment, should be used to notify readers. (Note: Notifying co-authors that their work is also available in TRACE is considered a best practice.)

2. Graduate student authors should explain their role in co-authored research published elsewhere. For example, were they the primary investigator? Did they direct and supervise the research that resulted in the publication? (See the Contributor Roles Taxonomy* for standard roles.)

3. Students need to obtain permission to duplicate copyrighted material for which they transferred copyright to the publisher. Authors often transfer all their rights to a journal publisher; if so, they no longer own their work and reprinting or redistributing requires permission.

4. Authors should seek permission to include an image/graphic/table in their dissertation/thesis, especially when:
   - the image/graphic/table is highly creative (i.e., not a simple list of numbers),
   - it is under separate copyright than the article/book in which it appeared, or
   - it was created by someone other than the author(s) of the article/book.

5. Authors should strongly consider an embargo to their work if it has been, or they anticipate that it will be, submitted for review to another publisher (e.g., journal) recently or in the near future.

Examples of #1 and #2

UCSD**

“Chapter 2, in full, is a reprint of the material as it appears in Nature Communications 2016. Authors: Kunal Bhutani, Kristopher L Nazor, Roy Williams, Ha Tran, Heng Dai, Zeljko Dzakula, Edward H Cho, Andy WC Pang, Mahendra Rao, Han Cao, Nicholas J Schork, Jeanne F Loring. The dissertation/thesis author was the primary investigator and author of this paper.” [Or: The
dissertation/thesis author listed in this publication directed and supervised the research which forms the basis for this paper.]

“Chapter 3, in part [or in full], is currently being prepared for submission for publication of the material. Authors: Kunal Bhutani, Abhishek Sarkar, Yongjin Park, Manolis Kellis, Nicholas J Schork. The dissertation/thesis author was the primary investigator and author of this paper.”

[The dissertation/thesis author was the secondary/tertiary author of this paper.]

UCI

"The text of this thesis/dissertation is a reprint of the material as it appears in (name of publication). The co-author listed in this publication directed and supervised research which forms the basis for the thesis/dissertation."

UCSF

“The text of this thesis/dissertation/manuscript is a reprint of the material as it appears in _____________ (name of publication). The co-author listed in this publication directed and supervised the research that forms the basis for the dissertation/thesis.”

Examples of #3 and #4

UTAH

- Copyright issues frequently arise with previously published material. Students need to obtain permission to duplicate copyrighted material (and, possibly, multiple author releases).
- A full credit line (stating “Reprinted with permission from” followed by the source) must be placed on the part-title page preceding a reprint or as a footnote on the first page of a chapter that contains a previously published article that has been reformatted to match all other chapters.

OTHER

Originally published in: Author name(s), date, “Article Title,” Journal Title, vol./issue. Reproduced [or adapted] with permission from [name of Copyright holder].

**One benefit of the UCSD model is that the message notifies readers when a work has been submitted to a journal but is still under review at the time the dissertation/thesis is accepted.
